Giving birth at the Galliera hospital

Pregnancy is not a disease – the purpose of medical tests is to safeguard the mother's health, monitoring the course of pregnancy and the wellbeing of the foetus. the periodic clinical, instrumental and laboratory tests ensure appropriate monitoring of the pregnancy.

Courses for pregnant women and support after childbirth (childbirth step by step) are available to women and couples throughout pregnancy and during the first months of the baby's life.

Donate the umbilical cord: Why not?

The umbilical cord blood is usually eliminated after childbirth. The blood sample from the umbilical cord is not dangerous for the mother neither for the baby because it is taken when the cord has been already cut. The umbilical cord is rich of embryonic stem cells that have the capacity to develop into every type of tissue if transplanted into a body and they help to cure a lot of diseases in particular the “immune” system (for example leukemia).

Getting an X-ray After a Car Accident

Getting an X-ray right away is the best way to find out what is going on inside your body after an accident. It may help determine the extent of your injuries and what treatment options are available to you. This information will help make sure you get the care you need and deserve as soon as possible.

In addition to being used after car accidents, X-rays can be used after surgeries or when people break bones.
